

THE SAV-C1 SPECIAL EDITION CENTRE CHANNEL SPEAKER

The SAV-C1 is the centre channel designed to blend seamlessly with speakers from the SAV home theatre range, however it has been designed to be compatible with virtually all other surround sound speaker systems as an add-in upgrade product.

FEATURES

Full magnetic shielding • 18mm MDF cabinet • Compatible with all AV systems • Gold terminals • Optional timber finish

THE BUZZ

This is a neat, compact speaker designed to blend seamlessly with all of the SAV product range. It's a two-way three-driver design that's fully magnetically shielded, has an 18mm MDF cabinet, gold plated terminals and timber finish to match other SE products. The range of reproduction is more than adequate for centre channel operation and the driver array contributes to an excellent spread of sound that does a fine job of locking relevant sound (dialogue and the like) to the screen. The SE version of this centre speaker features drivers and components that have been hand-selected to exacting tolerances.

OUR SAY

Opting for the Special Edition of the SAVC1 is without a doubt the way to go. Performance, looks and overall quality are better than the standard – for not all that much extra in outlay. I was surprised by the versatility of this little centre. It works well in a number of placement situations and has a flat, natural and honest sound quality that benefits any home theatre speaker system. The unit conveys a good sense of realism and full range performance that belies its compact dimensions. The textured cabinet finish is functional and the rounded enclosure corners pleasing to the eye.

CONCLUSION

This is a high quality unit that produces natural, articulate and believable sonics, even in the melee of a surround sound scenario. It's also outstanding value for money – and your purchase dollar stays in Australia.
